| Catalogue SKUs | Marketplace-ready | Compliance readiness | Workflow stages |

# 01 / THE BRIEF

## A UK signage business needs its Shopify catalogue translated into a professional marketplace operation.

The demonstration focuses on personalised house signs, address plaques and solar illuminated numbers. The customer-facing brand is premium; the operational layer is structured around SKU quality, marketplace mapping and publication QA.

|                                              |
|----------------------------------------------|
| Canonical SKU structure                      |
| Marketplace taxonomy and attribute mapping   |
| Listing title / feature / image QA           |
| Inventory synchronisation concepts           |
| Solar evidence tracking and publication gate |

# 02 / BRAND & CATALOGUE

## A premium storefront backed by structured product data.

Catalogue families: Solar illuminated · Aluminium · Acrylic · Brass · Personalised. Every product has a canonical SKU, variants, price, stock, category, material and marketplace status.

|                                              |
|----------------------------------------------|
| Canonical SKU structure                      |
| Marketplace taxonomy and attribute mapping   |
| Listing title / feature / image QA           |
| Inventory synchronisation concepts           |
| Solar evidence tracking and publication gate |

# 03 / SHOPIFY-STYLE OPERATIONS

## One operational view for product, inventory and channel readiness.

The admin concept separates the source catalogue from marketplace publication. It surfaces sync health, product counts, inventory value, marketplace status and unresolved errors.

|                                              |
|----------------------------------------------|
| Canonical SKU structure                      |
| Marketplace taxonomy and attribute mapping   |
| Listing title / feature / image QA           |
| Inventory synchronisation concepts           |
| Solar evidence tracking and publication gate |

# 04 / TEMU LISTING WORKFLOW

## From imported product to marketplace-ready listing.

Shopify source → category mapping → attribute mapping → listing optimisation → variant QA → image QA → compliance gate → publish / monitor. A dedicated listing editor makes the manual QA step visible.

|                                              |
|----------------------------------------------|
| Canonical SKU structure                      |
| Marketplace taxonomy and attribute mapping   |
| Listing title / feature / image QA           |
| Inventory synchronisation concepts           |
| Solar evidence tracking and publication gate |

# 05 / SYNC EXCEPTION CONTROL

## Marketplace operations become credible when failures have an explicit resolution path.

The portfolio includes two example exceptions: a variant attribute mismatch and an inventory update blocked by the compliance gate. Each has a cause, severity and next action.

|                                              |
|----------------------------------------------|
| Canonical SKU structure                      |
| Marketplace taxonomy and attribute mapping   |
| Listing title / feature / image QA           |
| Inventory synchronisation concepts           |
| Solar evidence tracking and publication gate |

# 06 / SOLAR COMPLIANCE

## Compliance is a gate, not an afterthought.

The demo tracks supplier declarations, technical specifications, battery/panel details and product-safety evidence. It deliberately avoids claiming that a particular certificate is universally required; evidence is matched to the exact SKU before publication.

|                                              |
|----------------------------------------------|
| Canonical SKU structure                      |
| Marketplace taxonomy and attribute mapping   |
| Listing title / feature / image QA           |
| Inventory synchronisation concepts           |
| Solar evidence tracking and publication gate |

# 07 / COMPETITIVE POSITIONING

## Compete on clarity and product quality rather than commodity pricing.

Temu house-sign listings frequently compete on low price and generic feature language. A UK manufacturer can differentiate through material specifications, weather resistance, professional photography, clear installation information, personalisation, fulfilment and documented product evidence.

|                                              |
|----------------------------------------------|
| Canonical SKU structure                      |
| Marketplace taxonomy and attribute mapping   |
| Listing title / feature / image QA           |
| Inventory synchronisation concepts           |
| Solar evidence tracking and publication gate |

# 08 / APPLICATION STORY

## A portfolio project that maps directly to the brief.

Recommended wording: “I built a marketplace implementation portfolio project around a fictional UK signage manufacturer. It demonstrates how I would structure a Shopify catalogue for marketplace export, manually improve imported listings, manage variants and attributes, and introduce a compliance gate for solar products so evidence is collected and reviewed before publication.”

|                                              |
|----------------------------------------------|
| Canonical SKU structure                      |
| Marketplace taxonomy and attribute mapping   |
| Listing title / feature / image QA           |
| Inventory synchronisation concepts           |
| Solar evidence tracking and publication gate |
